

WHAT OUR CUSTOMERS ARE SAYING:

"The City has been requiring black aggregate in slurry since 2000. Over this time, the slurry has had excellent color retention and has provided great contrast with traffic markings."

--Roger Lee, Street/Storm Maintenance Superintendent, City of Santa Clara, CA

"We had Valley Slurry change to Black Rock for their slurry mix and have been more than satisfied with the finish product. Aesthetically, it maintains its deep black coloring for years, which for the resident, is very appealing. They are very proud of the appearance of their street. Safety wise, the reflectivity of street striping is very pronounced and highly visible."

--Joe Orsua, Street Maintenance Superintendent, City of Lompoc, CA

TABLE MOUNTAIN BLACK® AGGREGATE

It's all about quality.

**FOR SLURRY SEAL
AND MICRO-SURFACING SYSTEMS**

TABLE MOUNTAIN BLACK® aggregate in Slurry Seal and Micro-Surfacing provides a blacker, richer finished product-that lasts.

QUALITY

Table Mountain Black® aggregate is a high quality, black Slurry Seal and Micro-Surfacing aggregate. Available in Type I, Type II, or Type III. This aggregate exceeds the specifications for:

- State of California Department of Transportation, Standard Specifications, Section 37-2
- "Greenbook", Standard Specifications for Public Works Construction, Section 203-5
- International Slurry Surfacing Association
- A-105 Recommended Performance Guidelines for Emulsified Asphalt Slurry Seal
- A-143 Recommended Performance Guidelines for Micro-Surfacing

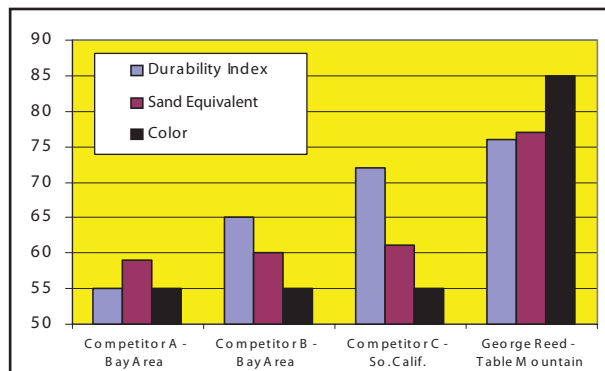

VALUE

Slurry Seal and Micro-Surfacing projects designed using Table Mountain Black® aggregate lasts longer and stays blacker.

- Increased application rates
- Increased binder content
- 2 to 3 years longer life
- Reduced inconvenience to residents
- Aggregate lighter in weight means more volume per ton

AGGREGATE COMPARISON

COST

Table Mountain Black® saves money.

Over time, project costs per sq. yd. / year is 78% of that of typical slurry aggregate projects due to longer life. Even though Table Mountain Black® projects initially cost an average of 10% more, savings over time are quite substantial. Even if increased trucking costs run up Table Mountain Black® initial project costs to be 30% higher, the cost over time would be still only be 93% of that of a typical slurry aggregate project.

SAFETY

As a benefit to the dark black color Table Mountain Black® produces, contrast to pavement markings is dramatically improved.

Reduced costs, better aesthetics, increased safety, and reduced inconvenience to residents makes Table Mountain Black® the clear choice.

**BLACK AGGREGATES =
BLACKER SLURRY SEAL**
